**Data Information:**  
 The land-water data were derived from 1:6,000 scale, color infrared aerial photography obtained on November 5, 2010. All areas characterized by emergent vegetation, wetland forest, scrub-shrub, and upland were classified as preexisting wetlands, while open water and aquatic beds were classified as water. The 2010 data includes a mud flat classification because of tidal fluctuations resulting in mud flat exposure.
