

Protect our Coast

Illustrated by Nikki Cavalier

Louisiana accounts for over half of all commercial harvest landings in the Gulf of Mexico. Wetlands, particularly coastal marshes, play an imperative role in the life cycle of about 90% of Gulf marine species, including the blue crab. Providing a protective nursery, wetlands house an immensely diverse quantity of species that rely upon this habitat. CWPPRA aims to continue the protection and restoration of these essential habitats for wildlife, aquaculture, and fisheries.
