

Data Source:
 Habitat data were derived from 1:12,000 scale color-infrared photography obtained from three separate flights. The project area and northern reference area were flown on December 19, 1996. A second flight was conducted on January 11, 1997, because there were overexposed frames from the previous survey. The last flight included the southern project area and was flown on March 22, 1997. Habitat classes are based on "Classification of Wetlands and Deepwater Habitats of the United States," Cowardin and others, 1979 (FWS/OBS-7-531), as modified for the National Wetlands Inventory Mapping Conventions. The data were overlaid on a 1998 Digital Ortho Photo Quad at 1:30,000 scale.
