

Louisiana *Salvinia* Weevil Propagation Facility (LA-284)

Project Status

Approved Date: 2017 **Project Area:** 33,262 acres
Approved Funds: \$0.93 M **Total Est. Cost:** \$3.80 M
Net Benefit After 20 Years: 26 acres
Status: Engineering and Design
Project Type: Invasives Control
PPL #: 26

Location

Coastwide

Problems

The invasive plant, giant *Salvinia*, was first observed in Chenier Plain marshes in 2009. Since then it has spread throughout most of the Louisiana Chenier Plain marshes. This plant can stack up above the water surface to as much as 6 to 12 inches. Under such conditions, oxygen exchange is greatly reduced, and decay of shaded *Salvinia* can easily cause anoxic conditions in affected areas. As a result, habitat quality of badly infested areas is severely degraded, and may affect many species typical of fresh marshes, including many species of management concern (alligator snapping turtle, mottled duck [including critical brood rearing habitat], wintering migratory waterfowl, black rail, king rail, little blue heron, whooping crane, and peregrine falcon).

Restoration Strategy

LSU Ag. Center has a pond in Jeanerette which is capable of producing weevil-infested *Salvinia*, but LSU does not have funding to operate a weevil production facility there. Costs associated with this project consist primarily of supplies and one part-time position to operate the pond, coordinate public weevil harvests, keep records of release locations, monitor *Salvinia* problem areas, assist landowners in conducting weevil releases, relay infested *Salvinia* to new locations, and conduct public outreach to promote the program.

Progress to Date

This project was approved for Phase I, Phase II, and Operation in January 2017.

This project is on Priority Project List (PPL) 26.
